

INFORMATION ABOUT MATH 117 ONLINE

The following is always subject to change. Changes are likely as I prepare for the upcoming semester/summer session.

Hello Math 117 Online Students:

Welcome and thank you for enrolling in Math 117 for the upcoming semester. Hopefully I can answer some of your questions.

Many of the details for this summer session are still to be determined. Normally exams take place in person and on campus however, due to the Covid-19 situation, no on campus attendance is possible at this time. This means that exams will have to be figured out. This is currently a work in progress.

In addition to everything mentioned here, I have set up a site to help you prepare for the course. The site is <http://mathgilbert.org>. Over the next week, I'll be updating the files found at the site. I'll have login instructions as well as text purchase options. Please check out this site in addition to reading through this entire document. Not all documents have been updated since the previous semester. This is an ongoing process.

The course is fully online however the exams are paper and pencil with Zoom monitoring. The dates and times of the exams can be found in the syllabus once the course begins. There are three to four exams and one final. All Zoom monitored exams will take place in the evening.

Other than the exams, the course is fully online. Quizzes are taken online and any other assignments required of you should be available online or on your own personal computer. The orientation is available online on Monday (Tuesday if Monday is a holiday) when the class officially begins. You will find a link to the orientation on the homepage of the course. This orientation is inside the course so there will be no access to it until the first day of class. There is no mandatory on campus orientation.

Your homework and quizzes are completed online at a site called Hawkes Learning (www.hawkeslearning.com). You will need to enroll in Hawkes Learning by using a course code and a student access code that is purchased in the SBCC bookstore or online at www.hawkeslearning.com. I have a link in Canvas that should help you enroll.

The course will not be active until Monday (Tuesday if Monday is a holiday) when the semester begins. If you attempt to login to the course before then, it may fail. On Monday (Tuesday if Monday is a holiday), you will be able to do so. Many students have difficulties logging in because they simply forget required passwords. Please write them down and keep them private. Take care of any computer issues immediately so the rest of the semester flows smoothly and you do not fall behind. In order to login on the first day, please follow these steps.

To Log in to your course:

Your course is taught through Canvas. To access your course please do the following:

- Step 1. Go to <http://pipeline.sbccc.edu> and use your Pipeline ID and password to log into Pipeline.
- Step 2. Select the Log into Canvas link possibly along the top right of the screen.
- Step 3. A page containing a list of links to every course you are signed up for will appear.
- Step 4. Select the link for individual class to access the course shell, e.g., MATH 117

You will be prompted to complete a profile the first time you log into Canvas. Update all your information here.

HELP with Canvas:

Call the online student help desk at 805-965-0581, X2949 or complete the web help form at: <http://support.sbcc.edu/contact/>

Course Requirements:

For the course, there is one access code for Hawkes Learning that should be available at the bookstore. It can also be purchased at www.hawkeslearning.com . For the course you need

1. Hawkes Access Code
2. The text “Beginning Statistics” 2nd edition by Warren , Denley, and Atchley. The Etext version is included in the above mentioned access code. You can purchase a hard copy of the text in the SBCC bookstore if you would like.
3. A graphing calculator (TI84). Other models might work but the TI 84 is the best for this course.

I have additional information to purchasing the required materials in Canvas or at www.mathgilbert.org. Please make sure that these are all available in the bookstore or online prior to the start of the semester. The course materials can also be ordered online by going to the SBCC online bookstore. Be aware, I have heard of long delays when ordering online.

Please understand something about the course. It **IS NOT** easier than an on campus course because you do not have to attend campus for class. In many ways it will most likely be more difficult and as some students have mentioned, it may be the toughest course you will ever take at SBCC. Over the past few semesters, I have found that discipline is the major factor. You must have the discipline to login and take care of the required assignments in a timely manner. Many students have found that if they don't have to go to class, time management on their part is difficult to manage. Once you fall behind, it is very difficult to catch back up. I am mentioning these concerns because I hope that you are taking this online course for the correct reasons. The correct reasons are for you to determine. The incorrect reason is that you think it will be easier because it is online.

I look forward to meeting each of you online and watch for future emails from me. Have fun and good luck with the semester.

Dave Gilbert, Department of Mathematics, Santa Barbara City College
